High-Gain Single and Dual Operational Amplifiers
For Military, Industrial and Commercial Applications

Features:

- *Input bias current (all types): 500 nA max.*
- *Input offset current (all types): 200 nA max.*

Applications:

- *Comparator*
- *DC amplifier*
- *Integrator or differentiator*
- *Multivibrator*
- *Narrow-band or band-pass filter*
- *Summing amplifier*

The CA1458, CA1558 (dual types); CA741C, CA741 (single-types); CA747C, CA747 (dual types); and CA748C, CA748 (single types) are general-purpose, high-gain operational amplifiers for use in military, industrial, and commercial applications.

These monolithic silicon integrated-circuit devices provide output short-circuit protection and latch-free operation. These types also feature wide common-mode and differential-mode signal ranges and have low-offset voltage nulling capability when used with an appropriately valued potentiometer. A 5-megohm potentiometer is used for offset nulling types CA748C, CA748 (See Fig. 10); a 10-kilohm potentiometer is used for offset nulling types CA741C, CA741, CA747CE, CA747E (See Fig. 9); and types CA1458, CA1558, CA747CT, have no specific terminals for offset nulling. Each type consists of a differential-input amplifier that effectively drives a gain and level-shifting stage having a complementary emitter-follower output.

The manufacturing process make it possible to produce IC operational amplifiers with low-burst ("popcorn") noise characteristics. Type CA6741, a low-noise version of the CA741, gives limit specifications for burst noise in the data bulletin, File No. 530. Contact your Sales Representative for information pertinent to other operational amplifier types that meet low-burst noise specifications.

This operational amplifier line also offers the circuit designer the option of operation with internal or external phase compensation.

Types CA748C and CA748, which are externally phase compensated (terminals 1 and 8) permit a choice of operation for improved bandwidth and slew-rate capabilities. Unity gain with external phase compensation can be obtained with a single 30-pF capacitor. All the other types are internally phase-compensated.

TYPE NO.	NO. OF AMPL.	PHASE COMP.	OFFSET VOLTAGE NULL	MINIMUM AOL	MAXIMUM VIO (mV)	OPERATING TEMPERATURE RANGE (°C)

CA748	Single	Ext.	Yes	50k	5	-55 to +125

* In the 14-lead dual-in-line plastic package only.

▲ All types in any package style can be operated over the temperature range of -55 to +125°C, although the published limits for certain electrical specifications apply only over the temperature range of 0 to +70°C.

*Technical Data on LM Branded types is identical to the corresponding CA Branded types.

ORDERING INFORMATION

When ordering any of these types, it is important that the appropriate suffix letter for the package required be affixed to the type number. For example: If a CA1458 in a straight-lead TO-5 style package is desired, order CA1458T.
